

Assay Report

Warm the assay buffer to room temperature before adding the reagent to each well. Read absorbance at 450 nm within ten minutes of the final incubation step.

Method notes

The plate was incubated for ninety minutes at thirty-seven degrees in a humidified chamber before the reagent was added to every well.

- First bullet point in the list
- Second bullet point here

Sample	Group	Signal
Sample A	Treated	1.24
Sample B	Control	0.98

Closing paragraph after the table.
